

## Bogerd Martin at the DNV Cyber Security Event

20 NOVEMBER 2025

Today our team had the privilege to speak at the DNV Cyber Security Event, where we highlighted a topic that deserves far more attention in our industry: maritime cyber resilience.

The threats are rising every year — from AIS/GPS spoofing to ransomware targeting vessel operations. And while technology continues to evolve, one fact remains unchanged:

- ☞ Prevention is always better than cure.
- ☞ Training the human element is still the strongest defence.

With AI quickly transforming the maritime landscape — a market projected to reach \$4.13 billion in 2025 — we now have real opportunities to detect anomalies, identify AIS/GPS spoofing, and strengthen decision-making across the fleet.

At Bogerd Martin and ChartTrack, we believe cyber security, digitalisation and AI must go hand-in-hand to keep our vessels and operations safe.

Let's keep the discussion going — maritime needs stronger collaboration, more awareness, and continuous innovation. Together we make shipping safer. ⚓
